The Ybex Clipboard is a clipboard manager with a lot of additional features. The main functionality of the clipboard manager is to keep track of the various items pasted from a document into the application window or from any other application. The manager can keep track of the copy and pasted items so that any paste action happens in the correct place.

Q: How to access the new memory address generated by `new char*(char*)`? I want to know how to access the new memory address generated by `new char*(char*)`.

```
int* intPtr = new int[3];
```

When I do this, I get an array of ints which live in the memory address `0x00xxxxxx`. But how can I get to the new memory address of the int array on these lines?

```
printf("Address of intPtr is %p ", intPtr);
printf("Address of intPtr's address is %p ", intPtr + 1);
```

What's the value of `intPtr + 1`? Is it the value of a new char?

Edit: This is from a source code from a GTK+ app at a project called VTFalcon.

A: With a normal `new`, you get the object at the address returned by the call. That address is a virtual memory address of the object, but the object itself is stored in whatever location the OS assigned. This is true of every single method you can call with `new`, not just `new char*`. If you did `new char*`, you would get a pointer to the start of the allocated memory, eg the memory you assigned to a variable of type `char*`. For example:

```
int main()
{ char *a = new char[5]; ... char *b = new char[3]; std::cout << b7e8fdf5c8
```

Ybex Clipboard X64

Define the Ybex Clipboard: Ybex Clipboard is a tool for creating screenshots by the “press-and-hold” method. At the same time, Ybex Clipboard can take part in the screenshot process by providing a clipboard where you can paste the text that you see in the screen. “Microsoft’s Clipboard is also called the clipboard. It is a software implementation of “paste”. It is often called the “generalized clipboard”, because it can be used for almost any data stored in RAM.” For even more typing, there’s a dedicated keyboard shortcut, “Ctrl + Shift + C”, which stores the Clipboard in the Software’s Clipboard and the one in the Hardware’s Clipboard simultaneously. In order to use Ybex, just click inside the application window and a new menu will be shown. By default, the program shows you the text that is currently active, which is the highest text displayed in the entire window or one of the ones that are currently highlighted. This can be changed from the Settings menu. Hold Ctrl and Right Click to paste into Ybex. This would clip some text automatically. Not sure if this tool is still being made or not. It seems to be in a development stage because its file size is only 13.63KB and it takes only 7.5 seconds to launch (very fast). But, since its design is very clean and it’s a first effort, I decided to review it and take it for a test drive. With Ybex Clipboard you can perform the following functions: Ybex is a Windows Application. It is intended to be used on Window Vista, Windows 7, Windows Server 2008, Windows Server 2008 R2. This program is absolutely free. You do not need to register and you do not need to provide your email address to be able to use it. Ybex Clipboard is not affiliated with any of the producers of the program and the creators of Ybex Clipboard are not being paid for it. Ybex Clipboard is not being distributed as a product and this is not a warez site. We do not provide them and they are not provided to us. Ybex Clipboard has been tested on different versions of Windows for example on Windows 7 and Windows 8.
